DIGITAL POWER

Alternative transport for an assignment

What can you expect...?

Why do we need alternative transportation options?

For our projects and assignments we often need to go to the client, wherever they are located. We have a large group of colleagues that travel with public transport and therefore it could occur that for clients that are located in for example a rural area, are not easily accessible, resulting in extensive travel time. If the travel time exceeds the standard one hour one-way door-to-door rule, we have drawn up the options available.

Public Transport is the standard

We continue to promote Public Transport within Digital Power. Within Digital Power it has always been the wish to contribute to sustainability in this way. However, when an assignment involves more than one hour one-way travel time door-to-door, Business Managers will look into making arrangements with the client. This might involve arriving at the client's premises a little later, working on the train beforehand, leaving earlier and working on the train back. In that scenario we will also upgrade from 2nd to 1st class train travel, if this is not already the case.

How will we make alternative transportation options possible...

Hence we believe there should be ground rules for whether or not to use an alternative form of transportation. This is because there is a clear need for it and to clarify the costs involved in the various options.

- For Sales:
  With these insights, we want to enable BM/AM to pass on any additional costs to the customer in advance and to keep in mind what they need to take into account for these projects or assignments. Finally BM/AM needs to take this up with Business Support Manager to make arrangements for the consultant when the solution for this assignment is agreed upon.

- For Consultants:
  With this explanation we want to make clear what you can expect or ask for, in a meeting with the BM/AM, when your assignment has more than standard travel time and you want to make use of these arrangements. We want to make it simpler for the consultants so the BM/AM needs to start the process with the Business Support Manager, he will then get back to the consultant.

What are the alternative transportation options

When travelling by public transport becomes almost impossible due to time (that exceeds two hours one-way travel time door-to-door) or the customer's location, we want to have alternatives available. Especially when starting later and leaving earlier is not an option for the client.

Use of GreenWheels:

- Only used when visiting paid clients once a week;
- For single travel distances that exceeds two hours one-way travel door-to-door, or where various materials need to be brought along for e.g. training or events;
- This functionality can only be enabled on the NSBC for a limited period by Office Manager or Business Support Manager and should be done at least 4 working days in advance.

Use of pool car or short lease:

- For more structural use when visiting paid customers (two or more times a week). Where travel distances exceeds two hours one-way travel door-to-door;
- This functionality can only be booked with Business Support Manager
    - pool car based on availability;
    - short lease must be organized at least 1 week in advance.

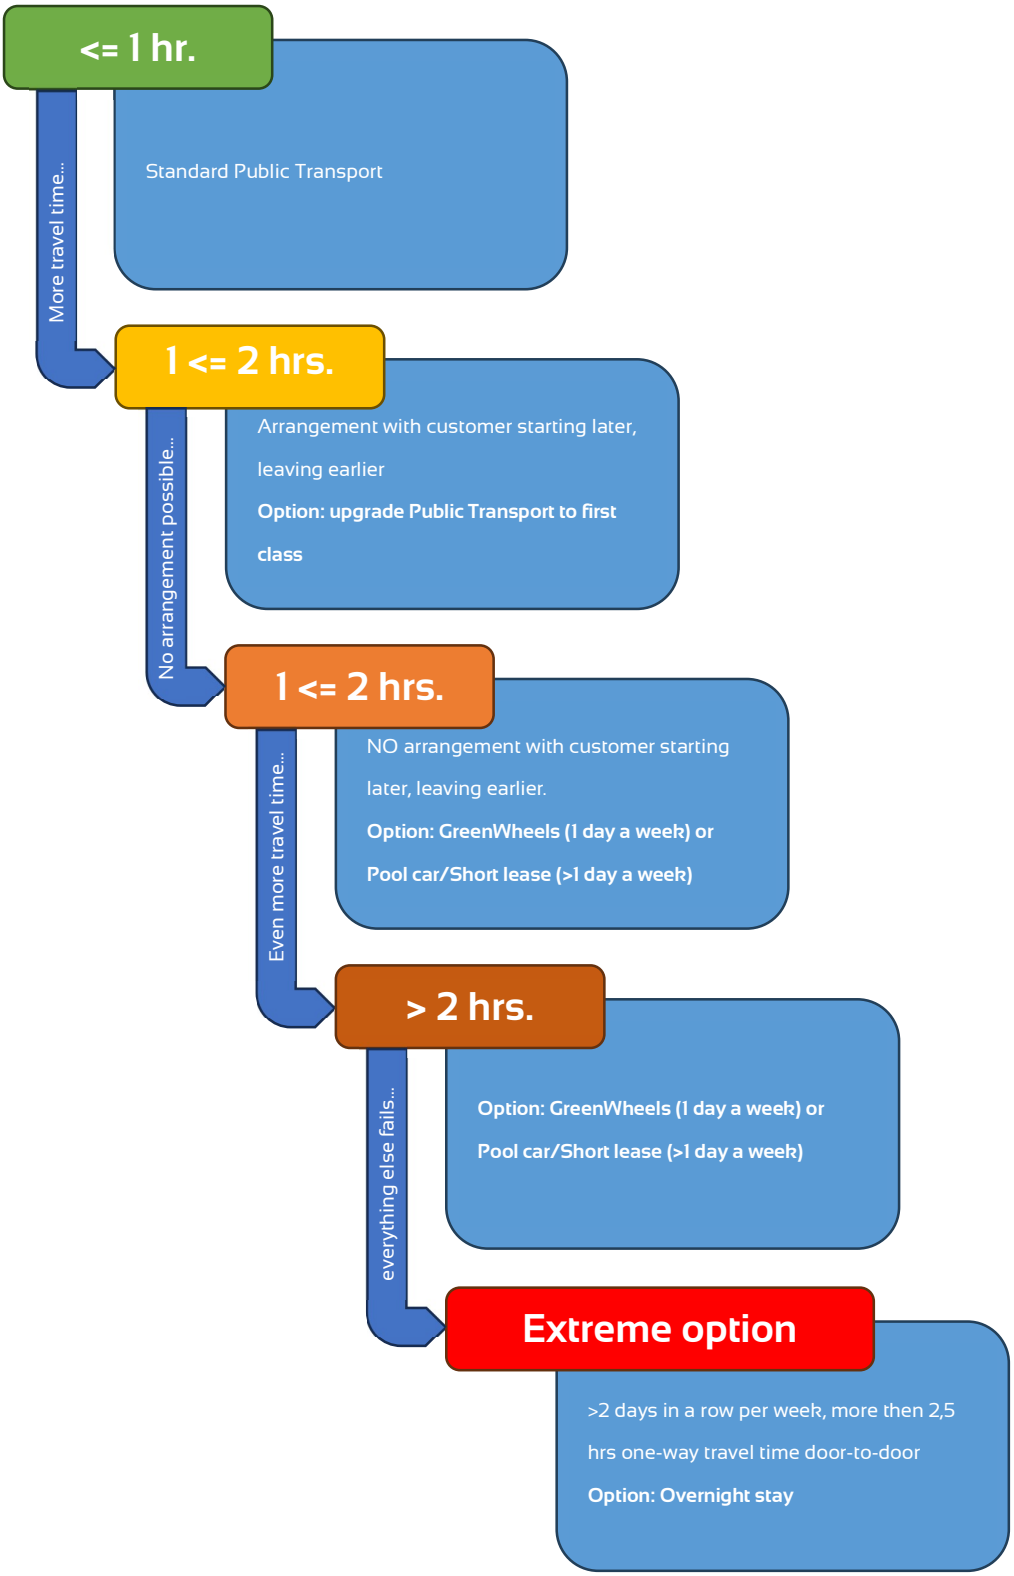
Hotel or overnight stay

In some cases it might be useful to stay overnight. If this is the case Digital Power will decide if and how to provide a budget for overnight stay. Whether this will be a hostel/B&B or a hotel depends on the location, time spend and cost. This will all need to be agreed upon with BM and for them to keep track of costs on the project. Also to enable Sales to pass on any additional costs to the customer in advance.

For consultants

SET UP GreenWheels via NSBC portal:

- **Have this functionality activated by Office Manager or Business Support Manager in the NS portal;**
    - BM must give permission for this, in connection with possible charging of costs;
    - This can only be activated on the NSBC for a limited period of time;
    - Must be done at least 4 working days in advance;
- **Todo for consultant that has approval on GreenWheels use;**
    - log in to your NS account and choose "GreenWheels" on the portal homepage;
    - Then you can create a GreenWheels account based on your Digital Power NSBC.



DIGITAL POWER

ONLY For Sales team specific information:

Cost insights (updated per 11-01-2024)	(per 16-8-2023)	(per 12-12-2023)
Public transport:		
• 2nd class subscription	about € 128,00 per month	about € 104,00 per month
• 1st class subscription	about € 220,00 per month	about € 204,00 per month

GreenWheels:

- Over the past few months (36 deployments of GreenWheels) for one day of an average of 150 kilometres (return) with about 10 hours of rental per day, the costs come to an average of: €151.00 per day

Shortlease:

- Example 12-2023:
  - B class car (Opel Corsa, VW Polo or similar) for 1 month including maximum 2250 kilometers p/m excluding fuel about € 727,82;
  - Fuel advance of about € 210,00, to be recalculated for actual consumption
  - Total cost around: € 937,82 per month

Hotel or overnight stay

In some cases it might be useful to stay overnight. If this is the case Digital Power will decide if and how to provide a budget for overnight stay. Whether this will be a hostel/B&B or a hotel depends on the location, time spend and cost. This will all need to be agreed upon with BM and for them to keep track of costs on the project.
