Mobility plan

Digital Power employs a wide variety of employees, each with their own situation. So we need this also in the choice of transportation to work. With 'the new way of working', business travel is also becoming an important issue. The aim of this mobility plan is to create clarity in the choices offered within Digital Power so that each employee can choose the option that best suits his or her situation.

The mobility plan is based on some basic principles:

- Public transportation is preferred. Public transportation is simply cheaper, better for the environment and the number of parking spaces at our offices is limited;
- As an organization, we appeal to everyone's responsibility to cut costs where we can;
- Flexibility in (temporary) means of transportation, especially with changing needs from assignment locations and period;
- All budgets listed are based on full-time employment. If you do not work full-time the budget will be prorated.

There are three options, as follows:

- Public transportation
- Private transport
- Lease car

Public Transportation

Public transportation is preferred. Digital Power provides each employee with an NS Business Card (hereafter NS BC), except if a lease car is chosen. With this NS BC you can travel by train, bus, streetcar, metro and public transport bicycle (OV-fiets). The 2nd class is the standard.

Upgrading to 1st class can be requested by mediors and seniors with a minimum of 3 years of service.

Any requirements regarding working from the train can be discussed with the Business Managers of the particular assignment.

Occasional use of a Greenwheels (through the NS BC) is also possible. If you want to use it several times in a short period of time or are looking for a more structural solution, there are often cheaper options available. Discuss this with your Business Support Manager.

From January 1, 2022, free train travel will be possible. This means that you can travel by train both for business and private purposes, throughout the Netherlands, without additional costs for the employee. This applies to everyone with an NS BC. To be allowed to travel privately as well, a minimum of 24 business travel movements (12 business round trips) per year is required. So the card can never be used for private travel only. If the IRS has doubts about business use, the burden of proof is on the NS BC user to prove which trips were business. If a fine is imposed it will be at the user's expense and will be deducted from the salary.

Private transport

If one chooses to travel by private transportation, this entitles one to EUR 0.19 net per kilometer. This applies not only to the car, but also for example to the bicycle. This can be claimed via AFAS and

will be paid once a month, together with the salary. Private transportation may be used in addition to an NS BC. For travel movements to and from stations, EUR 0.19 net per kilometer can be claimed.

As of January 1, 2023, the allowance for personal transportation will be increased to EUR 0.21 net per kilometer.

Lease car

Within lease cars, there are two possible flavors. If transportation is required by virtue of the work, Digital Power provides a pool car. There is also the option of driving your own lease car. Given the cost to the employer and the limited number of parking spaces at our offices, this option is discouraged. Both forms are explained separately below. As of January 1, 2022, the new lease car regulation will be implemented. Per month, 2 regular applications will be approved in order of application receipt.

Pool car

If a one-way public transportation trip is 90 minutes or more, Digital Power may provide a standard[1] pool car during the assignment period.

- The employee signs a loan agreement for the use of the car and responsibility over the car;
- The employee is responsible for scheduling service calls, tire changes, etc.;
- For private use, a personal contribution of EUR 100 net per month applies in addition to the statutory additional taxable benefit. The same amount is then deducted from the additional taxable benefit, so no payroll taxes are due on that portion.

Lease car

A leased car is an option after obtaining an indefinite contract. The budgets below are made available per seniority level in combination with the number of years of service within Digital Power:

Seniority level	Years of service	Lease budget incl. fuel	Personal contribution for private use[2]
Medior	2 t/m 3	EUR 650	EUR 100
Medior	+3	EUR 800	EUR 125
Senior	2 t/m 6	EUR 800	EUR 125
Senior	+6	EUR 950	EUR 150

There are some conditions to these budgets:

- Budgets are based on 30,000 kilometers per year. The actual contract is based on the best estimate, but in order to create a level-playing-field, the same annual mileage is used in determining whether there is a budget overrun. If there is an excess mileage due to business travel, it will never be at the expense of the employee;
- When lease costs (including fuel) exceed the budget, the excess is deducted from gross salary;
- The lease term is a minimum of 48 months;

[1] The standard pool car is a b-class car, for example the Volkswagen Polo, Seat Ibiza or Ford Fiesta category. This car will be equipped with navigation at all times.

[2] If the car is also used privately, a co-payment applies in addition to additional taxable benefit. The addition is a tax imposed by the government. The personal contribution is a compensation for the extra costs incurred by the employer for the private use of the car. These are two separate amounts.

- The employee commits to the lease contract and, upon termination of the employment relationship in any way, is responsible for the remaining term. Solutions to this include buying out the contract at the employee's expense, transferring the lease to a new employer or private situation or having the contract taken over by a colleague at Digital Power[3].
- At a minimum, the lease contract shall include:
  - Winter and summer tires
  - Fuel or charging pass for the Netherlands
  - Regular maintenance
  - Replacement transportation
- Costs to be covered by the employee:
  - Car wash
  - Refueling or charging outside the Netherlands
  - Charging facility at home
  - Parking or permit fees at home location
  - Tickets/traffic fines

Budgets are not increased during a lease. That is, if an employee is given a higher budget based on seniority and years of service, but has already entered into a lease, no changes are made to it during the interim.

Finally

The management has the option to deviate from the above rules at any time if there is a good reason to do so (changed laws or regulations, financial circumstances, etc.). In addition, we review the budgets for leased cars twice a year, as does the overall mobility plan.

[3] A new budget calculation will be made at all times for an internal takeover of a lease contract. If there is an overrun by the transferor, the overrun over the entire term will have to be paid off immediately by the transferor.
